SAFETY INFORMATION

READ USER MANUAL

Please read the instruction manual before use and store in a safe place for future reference.

DANGEROUS VOLTAGE

Warning: Turn the device OFF before adding bait or handling. Do NOT touch the metal plates inside the device when it is ON – risk of electric shock! This device emits high-voltage pulses that may interfere with pacemakers and similar medical implants. Consult a physician before use if you have a pacemaker. This device contains high-voltage components and is intended for adult use only.

This appliance is to be kept out of reach of children. This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved. Children shall not play with the appliance. Cleaning and user maintenance shall not be made by children without supervision. The appliance is not to be used in locations where flammable vapour or explosive dust is likely to exist. This appliance must only be supplied at safety extra low voltage corresponding to the marking on the appliance.

FOR INDOOR USE ONLY

This device is designed for use in dry environments. Always ensure the device remains dry during operation. Do not expose the device to environments with high humidity, condensation, or standing water (e.g. bathrooms or damp basements). Exposure to moisture may cause malfunction, electric shock or permanent damage.

INTRODUCTION

The Electronic Mouse Killer is a highly efficient electronic trap that kills mice quickly and hygienically using an electric shock. Its unique design was developed in collaboration with professional pest controllers to ensure maximum capture effectiveness in a user-friendly device.

Dead mice can be easily removed, and the trap is simple to clean after use, as the electrical component and the trap housing can be separated. The device features a built-in battery with long operating time and can be fully recharged with the charging cable provided.

INSTRUCTIONS FOR USE

INSTALLATION

1. Open the mousetrap: Release the lock switch. Holding the battery compartment in your left hand (with the buttons facing up) and the trap section in your right hand, slide the two parts apart by sliding your right hand towards you.
2. Open the trap compartment (simply pulls apart) and place an attractive bait (such as peanut butter or chocolate) in the bait tray at the back. Avoid touching any metal parts with the bait, as this may cause malfunctions.
3. Close the device: Hold the battery compartment in your left hand (with the buttons facing upward) and the trap section in your right hand (with the entrance facing away from you).
4. Align the mounting holes and push the device together. Slide your right hand away from you to connect both halves and then engage the lock switch.
5. Place the trap on a clean, flat, and dry surface along a wall, ensuring the entrance is positioned close to the wall.
6. To turn the device on, hold the light/on/off switch for 5 seconds. The green light will flash 3 times and the buzzer will sound twice. The device is now 'live' and ready for use. At this point, no lights will be visible.

Attention: The device is now active. Avoid any contact with the metal plates!

OPERATION

When mouse enters the trap, the trap begins to electrocute. Electrocutation continues for 2 minutes with repeated beeps and flashing green light. After these 2 minutes, the trap will beep continuously and flash the white light every 12 seconds for a further 5 minutes.

To check for the presence of a mouse at any time, briefly press the light switch. A white light will illuminate the trap section for 2 seconds. The slight translucence of the plastic allows you to see whether a mouse is inside. In the unlikely event of the mouse breaking contact during the initial electrocution phase, the trap will reset and be ready for the next catch.

To switch the device off, hold the light/on/off switch for 5 seconds. A blue light will flash 3 times to indicate power off. Any time you open the trap, the device will automatically switch off. It will not be live again until you reassemble and switch it on.

CLEANING

Open the device to access the mouse inside the trap. Using protective gloves if needed, tip out the mouse into a bag (do not touch the mouse). Seal the bag (double bagging recommended) and place in your outside household waste bin. You can clean the trap section using a suitable detergent and a soft brush. Be sure to dry both the inside and outside of the trap thoroughly before reassembly.

CHARGING

The Electronic Mouse Killer is equipped with two powerful batteries, allowing the device to be activated up to 70 times before needing a recharge. The device can be easily recharged using the USB cable included, a full charge takes approximately 2-2.5 hours. While charging, a red light will illuminate. Once fully charged, a green light will appear.

Note: The device cannot be used while it is charging.

WARRANTY: This device has a two-year warranty if used and maintained as described in this manual.

[WEEE Symbol - figure 1] For Private Households: Information on Disposal for Users of WEEE This symbol (Figure 1) on the product(s) and/or accompanying documents indicates that used electrical and electronic equipment (WEEE) should not be disposed of with general household waste.

To ensure proper treatment, recovery, and recycling, please take this product to designated collection points where it will be accepted free of charge.

Alternatively, in some countries, you may be able to return your product to your local retailer upon the purchase of an equivalent new product.

Correct disposal of this product helps conserve valuable resources and prevents potential negative effects on human health and the environment, which could result from improper waste handling. Please contact your local authority for details of your nearest designated collection point.

Penalties may apply for incorrect disposal of this waste, in accordance with national legislation.

For Professional Users in the European Union:

If you wish to dispose of electrical and electronic equipment (EEE), please contact your dealer or supplier for further information.

For disposal in countries outside of the European Union

This symbol is only valid in the European Union (EU). If you wish to discard of this product, please contact your local authorities or dealer and ask for the correct method of disposal.

The information in this user manual is changed and updated from time to time. This is due to the continuous redevelopment of our products. As such, it is not intended to be relied upon blindly or form part of any contract.
